

Jobab

AI shop assistant for Bangladeshi merchants

Pre-seed · 2026

siraajul.github.io/jobab

THE PROBLEM

60% of Bangladeshi small retail runs on Facebook DMs. The average shop owner gets 200+ DMs a day, spends 6+ hours replying, and loses █15,000+/month in missed sales while sleeping.

THE SOLUTION

An AI that answers DMs in Bangla, recognises products from photos, takes orders, sends bKash payment links, and hands off to a human when there's a complaint. The merchant connects their Facebook page in one click and watches everything live.

WHY NOW

- LLM cost dropped 10x in 18 months — economics finally work.
- Bangla AI got good in 2025 (Llama 4, Jina v3).
- F-commerce is dominant in BD — Lazychat raised \$1M, market validated.

PRODUCT (REAL, SHIPPABLE TODAY)

- Multi-channel inbox (Facebook, Instagram, WhatsApp)
- AI agent loop with tool calling + vision
- Vision-based product matching (photo → catalog)
- Live order assembly + bKash link generation
- Per-conversation cost telemetry
- Documented codebase + book at siraajul.github.io/jobab

TRACTION

- [N] merchant interviews completed
- [N] pilot merchants committed
- Meta Business Verification: submitted [date]
- App Review: [submitted / pending / approved]

MARKET

TAM \$180M ARR (500K BD shops × \$30)
SAM \$30M ARR (50K with 100+ DMs/day)
SOM \$2.4M ARR by year 3

BUSINESS MODEL

SaaS █999 / █2,999 / █7,999 per month
Blended ARPU ~█3,000 COGS ~█500/mo
Gross margin ~85%

THE ASK \$400K seed

18 months runway

- 100 paying merchants by M12
- \$50K MRR by M18
- App Review + WhatsApp Cloud live by M3
- Series A ready by M18

TEAM

[Your name], founder.

Built Jobab end-to-end. Speaks Bangla + English.
